

ABOUT US. . .

Six years ago inventor, Frederick Lange, began the process by drawing, designing and developing the video camera. After spending the first two of those years building and perfecting a successful camera, his hard work and dedication has paid off. The original idea to manufacture a rugged, durable camera that plumbers could depend upon has led to a reputation that speaks for itself.

Our attention to quality service and building the best camera possible at an affordable price will continue to be at the forefront of our business.

Customer Support

VU-Rite's goal, in addition to building the camera, is to offer the highest level of friendly customer service possible and to offer repairs with very short turnaround times and fair pricing policies.

Our level of success is measured by keeping our cameras operable and in the field. Everyone at VU-Rite has great pride in the camera we build; from the first component to the finished product and after sale service for our customers.

Camera Features

Our cameras are full color with adjustable lighting to control the amount of light needed for any job. Also standard on our cameras is a 512Hz transmitter molded into the camera head pigtail. When locating, you know within inches the location of the camera head.

Now, we have added extendable wheels, feet and handles to our new camera as well as interchangeable reels with various sizes pushrod and camera heads ...just pick the size camera head you need for each job and select the necessary reel. Just like changing a tire only easier. We offer both 150' and 200' pushrod units.
